The Swine Flu Pandemic

by David Christopher, MH

June 24, 2009

"The world is moving into the early days of its first influenza pandemic in the 21st century. *The swine flu virus is now unstoppable.*"

-World Health Organization Chief Dr. Margaret Chan

So... we are having a PANDEMIC!

With the announcement by WHO that the swine flu (or H1N1 flu) is a pandemic many people are in a panic and looking for answers. In fact, in Argentina the health care system was essentially shut down by hordes of people rushing to the hospitals to find out if they had swine flu.

Every article in the media indicates something different; from how many cases there are worldwide; to how soon a vaccine will be ready for the general public, to when it is predicted to get worse (after all, WHO has declared it *unstoppable*). Who and what are we supposed to believe?

First – what is the flu? Influenza (or flu) is a respiratory infection caused by any number of viruses. More than 200,000 people are hospitalized each year from the seasonal flu and about 36,000 die each year. Flu season happens during bad weather when people stay indoors and therefore don't get the fresh air, exercise, or sunshine with its accompanying vitamin D production. In other words, we create a personal environment conducive for viral invasion.

Influenza becomes pandemic when many people are subjected to a weakened or polluted personal or communal environment. A pandemic is an epidemic of infectious disease that spreads through populations across a large region; for instance a continent, or even worldwide.

Here are a few examples of Pandemics you may have heard about:

- The Plague - middle ages-1347 AD
- The Spanish Flu – 1918
- HIV/Aids virus – 1980's +
- Swine Flu – 1976
- Gulf War Syndrome -1990's
- Swine/ Avian (H1N1) - present
- Avian Flu – it has been predicted that this will be a pandemic in the future

The pandemic of 1918 was devastating to the population at large. It is estimated that it killed 50-100 million people worldwide (<http://en.wikipedia.org/wiki/Pandemic>). However, there was one simple home remedy that was not only effective in curing people; it also prevented others from contracting it. What is that simple remedy? It is something that can be found anywhere in the world and is often overlooked by the medical profession. We can easily purchase it in any grocery store for *under \$1.00!* Many of us already have it in our homes and use it in cooking but don't realize the medicinal qualities it contains. This easy home remedy is simplygarlic.

How does it work? Garlic has over 28 sulphide compounds, one of which is created when garlic is crushed. The amino acid Alliin is in a compartment and the enzyme Allinase is in a separate compartment. The crushing combines these two ingredients and creates a new substance named Allicin. This smelly, unstable sulphide is more powerful than any antibiotic and is potent in crushed fresh garlic. This super herb has appeared in close to 1,000 published papers and has been shown to kill bacteria in concentrations as low as 1 part extract in 50,000 parts water. The odor kills bacteria in Petri dishes at 20 centimeters distance and killed bacteria that were resistant to the antibiotic chloramphenicol. Garlic is the only antibiotic that also promotes healthy digestion and protects the body from toxins produced by the infection.

The best insurance in the world against the "predicted coming plagues" and "killing diseases" is to have the body in a good healthy condition. Disease germs are merely scavengers and can only live on toxins, mucous and residue from junk foods. They cannot and will not damage healthy cell structure. Therein lies the key! Have a healthy, clean body and disease germs will by-pass you - wanting nothing to do with your body, because it would be "obnoxiously clean" (in their language) and have no filth for them to live on.

If you do get sick, however, you should not be around other people. You should stay home and take care of yourself.

Avoid all animal products (especially dairy) and go on a liquid diet of fresh juices and plenty of distilled water and red raspberry tea. Make sure the bowels are moving so as to eliminate toxins quickly.

Next, lubricate the body liberally with garlic oil (fresh garlic pressed into olive oil) – especially the chest and soles of the feet. This is an easy way to take in a lot of garlic. You can get a recipe for onion soup on our website listed below.

One woman called because many at her work had been out with a flu that was lasting about two weeks. She came home from work feeling sick and called to see what she could do. She wasn't up to going to the store so I questioned her to see what she had in the house that she could use. I told her about this simple remedy which includes the juice from two apples, four stalks of celery, and one inch square of ginger. The Chinese have done studies that show that effectiveness of ginger in killing viruses. She drank this juice all day along with water. She also stayed down and rested. The next day she was back at work.

To complete the process of healing, we suggest you stay on fresh juices, fruits and vegetables, and drink plenty of distilled water.

If the plague, or some other epidemic hits before you are in a good healthy condition, it is good to have an aid for a fast cleaning. My father, the famed herbalist Dr. John R. Christopher, tells the following story about an aid that does just that. Here is his story in his own words:

While lecturing in Snowflake, Arizona one night, one person in the group asked if we had an Anti-Plague formula, and I was prompted to give them a certain combination of herbs (that included garlic) to use.

The people there were very impressed to go right to work and prepare this liquid, having it ready for use. We had told them that plagues come at unexpected times and it could be tomorrow or maybe even years away, but expect the unexpected and be ready now. If the formula was still unused, from "no need" years later, we could all be happy but "TIS BETTER SAFE THAN SORRY".

These good people made it up in gallon lots and had it on hand. Months later while speaking in Tucson, Arizona, someone asked for the "Anti-Plague remedy." I was surprised and asked where they had heard of it, as we had only given it out once. We were informed that a plague-like condition or flu had hit the Snowflake area and when other aids failed, this combination of herbs in liquid form performed its job with amazing speed.

At our next series of lectures in Snowflake, sometime later, we heard one testimony after another about the many different types of ailments that were given quick relief by using this formula.

The formula (now called Super Garlic Immune Formula) has now spread in many areas from coast to coast and is being used with good results. A man picked us up at an airport on the west coast a short time ago, and on the floor of his car was a bottle with liquid in it. When asked what it was he said, "Oh, that's your Anti-Plague remedy, we never travel without it as it works good on about any sickness that comes up while we are traveling. We are also never without a bottle of it at home."

Learn more about Dr. Christopher's Super Garlic Immune Formula, find a recipe for the soup and learn more about educational opportunities regarding the pandemic at the website below.

David Christopher, MH, is the son of famed herbalist Dr. John R. Christopher. David Christopher is a popular lecturer – his repertoire is extensive including such subjects as weight management, diabetes, cancer, cleansing, backyard/grocery store herbology, etc.
